Projects

Organic Mart | [Website](#) | [Github\(client\)](#) | [Github\(server\)](#)

- It's a product-based website.
- An authenticated user can buy the product from this website. Firstly he/she has to place an order.
- The order will be stored in the database and the user will get a notification. After that, the user can check out.
- The user can see his/her products after placing the order.

Technology(Front-end): React JS,HTML5,CSS3,Bootstrap

Technology(Back-end): Node JS,Express JS,Mongo DB.

Ride It | [Website](#) | [Github](#)

- It's a ride-sharing website.
- An authenticated user can choose a vehicle such as a bike, car, train, bus for riding.
- User can select their destination after that total capacity and fare will be showed to them.

Technology: React JS,HTML5,CSS3,Bootstrap

Wedco | [Website](#) | [Github\(client\)](#) | [Github\(server\)](#)

- It's a service-based website. An authenticated user can choose a service and buy that service.
- After placing orders users can see their specific orders.
- Users can also add reviews. The review will be saved on the database and will dynamically show on the websites home page
- There is an admin panel where the admin can add new services, see all the orders, make a new admin. Admin can delete their services.

Technology(Front-end): React JS,HTML5,CSS3,Bootstrap

Technology(Back-end): Node JS,Express JS,Mongo DB.
